## What Tokenization Can Do for Development Finance

In collaboration with

[tokenizedeconomies.org](https://tokenizedeconomies.org)

Tokenization offers transformative potential for development finance by increasing transparency, efficiency, liquidity, and stakeholder engagement—especially in fragile or underdeveloped economies. It enables programmable, traceable, and inclusive financial systems that can overcome traditional limitations of banking, risk management, and project funding. With sound system design and policy alignment, tokenized development finance can redefine how global development goals are financed and delivered.
